

# MIQIP DATA SERVICE PLATFORM

The illustration features several IHC offshore equipment components, including a crane hook, a derrick, and a platform, set against a blue background. A laptop in the foreground displays the MIQIP dashboard, which includes a search bar, a navigation menu, and a main content area with four key performance indicators (KPIs) and a map.

Operational Assets	Downtime	Closed Piles	Utilization Rate
6/10 +5.25 % Since last month	0h55 -7.23 % Since last month	77/600 +12.98 % Since last month	34.02 % +4.87 % Since last month

The dashboard also includes a map showing the location of assets and a navigation menu with options: Dashboard, Equipment, Types, Companies, Users, and Reports.

## LET'S BUILD

IHC IQIP is proud to present MIQIP, IHC IQIP's Data Service Platform. MIQIP is a globally connected platform that will provide you with operational intelligence on your foundation installation assets. This platform will be available from any web-enabled device. Hammer operators, project managers and service crew now have direct access to operational data enabling them to make better data-driven decisions.

#### **EFFICIENT AND RELIABLE REPORTING**

We understand that you need efficient and reliable reporting. That is why we designed the MIQIP Web portal to make jobsite preparation possible from the comfort of your office. Here you will be able to get an up-to-date transparent overview of the documentation and certification related to your assets. Next to that, you will also be able to easily push piling plans and equipment spreads configurations to the selected C-36 units.

#### **REMOTE MONITORING OF ASSETS**

Difficulties with the remote monitoring of your assets? MIQIP will provide reliable near real-time accurate data on your asset location.

#### **IMPROVED JOB SITE PRODUCTIVITY**

Also, interested in even more job site productivity? With MIQIP, you will gain operational control with automated piling, troubleshooting, testing functions and modes for special operations while you benefit from improved safety.

#### **PREDICT MAINTENANCE**

In addition, with MIQIP, you will be able to predict maintenance. From now on, you will view the status of your assets via the portal and use the automated self-diagnosis functions when necessary to predict maintenance. This enables you to further maximize your up time. You can also improve the efficiency of your foundation installation assets based on the data, because the portal will advise you on the best way to adjust your tools in your situation. Whether you work with your own equipment or are a rental customer, your success is assured as we together will unlock the power of data.
